SUMMARY

Senior growth and marketing operations professional with seven years across B2B and B2C. I run the marketing side and build the systems underneath it: CRM and RevOps architecture, lifecycle and paid acquisition, and the measurement layer that proves what worked. The combination is the point. I take a messy revenue operations problem, design the fix and build it in HubSpot, Python, SQL and GA4 rather than queue it with engineering, in house or as an independent partner.

PROFESSIONAL EXPERIENCE

Senior Digital Manager (Growth and RevOps)

The Synergist | Brussels, Belgium | January 2026 to Present

Own growth and revenue operations across a six program portfolio: HubSpot CRM architecture, paid media, measurement, and the automation and reporting layer leadership uses to make budget decisions.

- Repaired more than 2,000 broken deal relationships in HubSpot through Python automation, including a 465 of 523 association cleanup that brought back pipeline reporting a major fundraising program had stopped trusting, and cleaned 1,064 low signal contacts to hold the database inside its 17,000 contact tier.
- Designed and built a program's membership system inside HubSpot, which does not support the model natively, specifying the custom properties, record relationships and workflow logic its join and renewal lifecycle now runs on, and unblocking a stalled renewal automation traced to a frozen subscription date property.
- Built a buyer intent layer over the CRM in Python, using HubSpot's AI to read indexed emails, notes and discussions and score 51 company to program pairs across 59 closed won deals, replacing an annual guess at renewal and expansion risk with a standing four tier view.
- Directed €25,000 to €50,000 in annual LinkedIn, Google and Meta Ads budgets across five concurrent programs, including GDPR compliant audience builds for EEA markets where standard targeting is unavailable.
- Took ownership of GA4 and GTM across every program website, correcting tracking so attribution is reliable enough to judge acquisition spend on.
- Replaced flat monthly KPI reporting with a three pillar framework and a three things to know executive summary, powered by Python pulling GA4, HubSpot and LinkedIn Ads into self serve dashboards. A multi day manual cycle now runs as a scheduled job.
- Turned grant research into a structured tracker that screens funding opportunities against each program's own criteria, replacing a manual program by program search with a working shortlist of what is worth applying for.
- Diagnosed a search indexing failure on a flagship program site down to URL structure, Core Web Vitals and broken image delivery, then shipped the findings as a five tab interactive audit dashboard the wider team now works from.

Business Data Analyst

Adore Me | Bucharest, Romania | 2023 to 2025

Owned lifecycle analytics and experimentation across a 30 million record customer database, from segmentation models through the reporting infrastructure three departments relied on.

- Ran a high velocity A/B testing program across offers, segments, cadence and creative, lifting click through rate 5 to 10% per cycle and consistently beating team targets after iOS privacy changes made open rate unreliable.
- Helped build an SQL forecasting tool that modelled the best send cadence for email, push and SMS, so lifecycle planning was set by expected performance rather than habit.
- Built RFM segmentation models and Python pipelines across email, SMS and push, cutting a full day of manual reporting to under an hour as a scheduled job.
- Built a headroom model calculating ROI and break even by channel, which became the framework the business used to evaluate paid and email investment.
- Migrated cross team reporting into Looker Studio as a single source of truth for Marketing, Product and Finance, with the underlying data work running through BigQuery.
- Worked hands on through Black Friday and Cyber Monday across operational planning, campaign design and live performance analysis, with the campaigns consistently delivering against target.

Senior CRM and Marketing Coordinator

Adore Me | Bucharest, Romania | 2020 to 2023

Ran CRM strategy and campaign delivery across email, paid and lifecycle channels for a 30 million contact database.

- Contributed to the creation of the loyalty program, shaping its mechanics with the team and building the KPI dashboards that tracked engagement, retention and revenue contribution.
- Built the SQL and Python segmentation frameworks that lifecycle and paid campaigns were targeted from.
- Rebuilt landing pages and email flows from funnel drop off and click map analysis, then turned the findings into a CRM roadmap the wider team adopted.
- Ran personalization across email and paid using behavioural signals and survey responses, improving click through rate and post click conversion.

Independent Digital & CRM Consultant

Self employed | Remote / Europe | 2023 to Present

Come into existing CRM, analytics and reporting setups, work out what is broken and build the fix, for sports media and creative agency clients.

Client work

- Email deliverability and CRM infrastructure covering Mailkit configuration, Google Postmaster Tools monitoring, BigQuery integration, DNS authentication and CMS API access, alongside ongoing technical SEO and WordPress performance work.

Systems built

- LinkedIn Ads performance reporter that runs with no human in the loop: campaign data from the LinkedIn Ads API, written commentary through the Claude API, formatted output posted to Slack every week.
- GA4 reporting pipeline in Python covering 8 website ecosystems, generating HTML dashboards and Excel exports and replacing the full manual monthly cycle.
- Social intelligence engine monitoring 70 plus sources through Apify and RSS, running thematic and sentiment analysis through the Claude API into a monthly briefing with recommendations.
- AI search visibility checker, bring your own API key, that audits how often a brand appears in ChatGPT, Perplexity and Gemini answers, scoring visibility, share of voice against named competitors and citation sources, running entirely client side with no backend.

Earlier Roles

Marketing Associate, Neby Fitness, Bucharest, 2019 to 2020. Data informed acquisition across social, email and web with SEO led content optimization, growing organic reach while reducing acquisition cost.

Growth Strategist (Internship), Constantin Tanase Theatre, Bucharest, 2019 to 2020.

EDUCATION AND CERTIFICATIONS

- **BA Fine Arts and Cultural Management, National University of Theater and Cinematography I.L. Caragiale, Bucharest**
- Google Data Analytics Professional Certificate: SQL, R, data visualization
- Google Digital Marketing and E commerce Certificate: Google Ads, e commerce strategy, SEO, email marketing, analytics
- HubSpot Inbound Marketing Certification: inbound strategy, lead nurturing, CRM workflows
- IBM Data Analyst Professional Certificate: Python, Excel, advanced analytics (in progress)
